

Mashburn Transportation Services, Inc.

9/26/2017

Power BI Consultant
Bakersfield, CA
Budget: \$1000-\$1500
Timeline: By Oct 13th.

Description of Work:

End Goal: To give us the means to embed a link into our Wix website to allow client login into the EM1, which would request the appropriate Power BI token, and receive the dashboards we have created for that user.

Background:

We purchased Power BI Pro for three users, created dashboards, and did public share to web. Found out that there is no security for this type of dashboard sharing. Discovered through Microsoft that Power BI EM1 would be required to allow authentication and credential sharing for Power BI Dashboards through Token and EM1 hosting.

We purchased EM1 and migrated the existing workspaces to the EM1 server, but have no documentation from this point to get a customer portal set up for our end users. I would like assistance getting these workspaces to the clients' desktop, so they can access the appropriate dashboards. I believe the process includes utilizing Azure Active Directory, which is currently tied to our Office365 account. I'm assuming we have to create customer groups and departments with individual user credentials to assign permissions.

The Issue: Microsoft has not given us the appropriate documentation to map this process out from start to finish. They have been very vague and very late with responses. We would like to work with someone local who has experience working not only with Power BI but with the EM1 module. We can maintain the dashboards, both existing and new, once we have the process mapped on what needs to be done.
